Manage & Report

Design Universe provides tools, which make it easy to create web forms online. These Forms can be used for internal tasks like information management, or can be published on websites and blogs.

Docs Builder does not need to be downloaded or installed. You can access, edit or manage your forms and data form anywhere at anytime with your web browser.

Create & Convert

- WebProcedure converts your documents in no time. Only a few mouse clicks are needed to create Mobile Smart Forms which can be easily shared and filled.

- Many business people still rely on communication via email to share documents, forms, excel sheets or pdf files with their colleagues and partners.

- Design Universe WebProcedure and Docs Builder enable you to easily convert all kind of documents to Mobile Smart Docs (MSD) or interactive web applications. The formatting and formulas from the original documents are preserved and converted to MSD or web app as well.

Business partners can access and use documents, forms, or worksheets from anywhere – from the office as well as en-route.

- You can set access rights for groups and users to maintain a high standard of security.

- Now it's possible to edit, search and share documents online and offline, whenever and wherever you like.

- With our products, your team will work a lot more effectively.

Create & Convert

Convert your documents. Customize forms so that they perfectly fit your company's needs. Every worksheet can be converted to a Smart Form. You can use Smart Forms online as well as offline. Interactive forms are easy to use and can of course be printed, which makes using and sharing them easy and versatile.

Edit every document you want in one file and in every common browser.

Effective collaboration. Converted documents can be saved online so that your colleagues can access them anytime and from anywhere.

Keep track of everything. Every action is saved in a log file, so you always know what's going on.

Privacy. Extensive security features help you to set viewing and editing rights.

Printing options. You can print and fill worksheets on paper, scan the filled page and import the date with WebProcedure. WebProcedure compares the scanned image with the original form, recognizes the handwriting and assigns the data to their respective fields.

Mobile Smart Forms can be used within the company network, the internet or offline.

Mobile Smart Forms automatically connect to your database and sync data.

### Builder: Publish your webform

Once a web form is ready and saved, you can publish it and embed it in your website or blog. The publishing process enables other people to fill in your form, and when it is filled you then automatically receive an email alerting you of a new data entry.
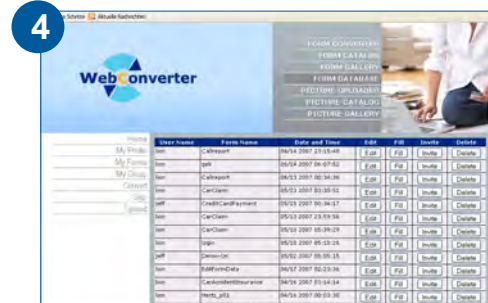

In order to publish a web form all you need to do is choose the publish option that best suits your needs (There are 5 options: URL, Iframe, link, script, and mail), Copy the script that appears and paste it in your web page.

The embedded form

Manage your web database

Managing data is an important part of the Design Universe solution. All the data entries are not only sent as alerts to the form owner via e-mail, but are also gathered in the Design Universe management tool (web database management). This tool enables the form owner to manage and analyze all data accumulated through the form effectively. This web database management tool is available for published as well as internal forms and it contains the abilities to sort, filter, delete, edit, chart and much more.

Workflow Management with Docs Builder:

An online purchase typically follows a process similar to the following:

Step 1:	Fill name, email etc.
Step 2:	Put product into shopping cart.
Step 3:	Fill in credit card number etc.
Step 4:	Agree to conditions.
Step 5:	Submit.

The process is similar to filling a multi-page form. Some of the same information can be used in more than one place and on more than one page, like the billing address and ship-to address; some fields are required to be filled, such as the name and number on the credit card. Such rules for filling and other behaviors can be automated with Docs Builder. The Docs Builder can also process information like font size, color, etc.

You can load data from any application you like and connect to any database. Our products can be integrated in an existing infrastructure for maximum flexibility.

Design **UNIVERSE** ®

Integration in workflows and processes

- User fills excel sheet.
- User submits template, XML data is extracted and a BPEL
  process is started.
- When approved, user gets a notification (with word template).
- XML data are transferred to WordML using XSL.
- Task is assigned to manager and email notification is sent.
- The edited Word document is inserted back to the process.
- Task is assigned to next manager.
- …

Integration with
a lot of third
party applicati-
ons is possible
(e.g. Share-
point).

Manage & Report

- **Manage your information** just like on a normal computer. Put your business information in easy to use web folders. Your documents will be displayed in the convenient hierarchy. You can also move files with drag & drop ease.

user_id	FormId	UserNbr	RESULT_TextField-1	RESULT_RadioButton-2	RESULT_CheckBox-3	RESULT_TextField-4
1	FormResult	187	test	Radio-1	CheckBox-2	qwer
1	FormResult	187	datam	Radio-1	CheckBox-2	qwer
1	FormResult	187	Apple	Radio-0	CheckBox-8	Subway

- **Find your documents fast.** Use our integrated search engine to find the information you need in no time.

- **Reduce data traffic (bandwidth).** Instead of large email attachments, just send your partners and colleagues a link to the documents you want to share. You can flag some documents as "private" or protect them with a password so that only some users can view and use them.

- **Create powerful and individual databases.** Use the standard Design Universe templates or create your own templates to connect to your local database.

You can publish Mobile Smart Forms as web forms and set access rights just as you want. That way, only selected user groups can access your private data.

Manage & Report

- **Generate formulas to update forms and data automatically.** Use formulas to generate information that automatically updates if certain other data elements are being changed. Create individual routines to check data validity and to automate processes.

- **Keep everyone updated.** WebProcedure automatically syncs contents and makes mobility productive.

- **Sort, group and filter data.** Several viewing options make reporting easy.

- **Import and export** information to other applications like SAP, Siebel, Lotus, Outlook, etc.

Customers, partners or the public can fill the published web forms with any web browser on the market.
